AGRICULTURE AND FOOD

With direct access to producers, key markets, and more than 80 million acres of prime Canadian farmland, Saskatchewan offers a strong base for agricultural business. The province is the world's largest exporter of canola, peas, lentils, durum wheat, flaxseed, oats, and mustard seed, and recorded more than $18.5 billion in agri food exports in 2024.

Regina, the provincial capital, hosts two major global events,Canadian Western Agribition and Canada's Farm Show, connecting buyers, producers, and innovators. The city is also a major transportation and logistics hub, with direct access to the Trans Canada Highway and key rail networks that support efficient movement of agri food products across North America.

Export Infrastructure

- Home to two intermodal transportation facilities, including a self-governing inland port
- Reach more than 60 million customers within 24 hours
- Access over 270 million customers within 48 hours

RAILWAY

Agtech Hub

Regina hosts a strong cluster of agtech startups, incubators, accelerators, and a $60 million agtech VC fund, alongside world leading companies in automated agriculture, precision farming, carbon sequestration, and byproduct innovation.

Supercluster Support

Protein Industries Canada, headquartered in Regina, advances Canada's $250 billion plant based sector by funding and developing plant based food, ingredients, and technologies.

The Canola Play

Over $350 million in new construction is positioning Regina as a major canola crush hub, adding nearly one million metric tonnes of new Cargill processing capacity. The region also holds three investment grade BDO Zone ratings, recognizing Regina's strong biomass supply and low risk environment for value added agriculture and low carbon fuel production.

Agriculture Manufacturing

Agriculture manufacturing in Regina thrives with integrated capabilities in grain handling, storage and transportation, livestock and forage equipment, food and beverage processing, and precision technology systems.

Food & Ingredient Processing

Regina leads in advanced food processing, turning wheat, barley, lentils, canola, flax, and oats into high value ingredients for global markets, with significant opportunities in value added agriculture.
